Professional Summary

Information Technology Engineer with 1.6+ years of experience in SQL, Python-based automation, data processing, and database-driven solutions. Currently expanding into software development through hands-on projects with PHP, Neo4j, and Cypher. Built graph-based applications involving Neo4j data modeling, database integration, CRUD operations, search, filtering, and pagination. Also experienced in developing LLM and RAG applications using LangChain, LangGraph, embeddings, and vector search.

Technical Skills

- **Languages:** PHP, Python, SQL, Cypher
- **Databases:** Neo4j, MySQL, Vector Databases
- **Backend & Tools:** Composer, Docker, Git, REST APIs, Laudis Neo4j PHP Client, Bolt
- **AI / GenAI:** LangChain, LangGraph, LLMs, RAG, Embeddings, Vector Search, AI Agents
- **Python Ecosystem:** Pandas, NumPy, Scikit-Learn, Selenium, SQLAlchemy
- **Data & BI:** ETL, Data Processing, Power BI, DAX, Power Query

Professional Experience

Associate – Technical Data & Automation

Mumbai, India

Sona Phosphates Ltd.

Jan 2025 – Present

- Engineered Python-based automation and ETL workflows for sales, finance, and operational processes, reducing manual processing workload by over 40%.
- Automated global Amazon competitor-price and Buy-Box data extraction using **Python, Selenium, and Pandas**, reducing processing time for 1,000 ASINs from approximately 8 hours to 2 hours.
- Developed optimized **SQL** queries using CTEs, joins, and window functions to process and analyze large-scale enterprise datasets.
- Built Python data-validation workflows to identify anomalies and improve the efficiency of internal data-audit processes.
- Developed Power BI dashboards and data models to provide visibility into sales, inventory, profitability, and operational KPIs.

Selected Engineering Projects

MovieFlix – Graph-Based Movie Recommendation System

PHP, Neo4j, Cypher, Docker

- Built a movie application using **PHP and Neo4j**, modeling movies, actors, directors, and genres as connected graph entities.
- Integrated the **Laudis Neo4j PHP Client** using Bolt connectivity, Composer, environment-based configuration, and a repository-based data-access architecture.
- Implemented Cypher-based movie search, multi-criteria filtering, sorting, CRUD operations, and database-level pagination using **SKIP/LIMIT**.
- Imported and transformed a 500-movie dataset into Neo4j and handled Neo4j query results within the PHP application.

YouTube RAG Chatbot

Python, LangChain, LLM, Vector Search

- Built a retrieval-augmented chatbot that processes YouTube transcripts and uses semantic retrieval to provide context-aware answers.
- Implemented document processing, text splitting, embeddings, vector retrieval, prompt construction, and LLM-based response generation using LangChain.

Vector Search / Retrieval Application

Python, LangChain, Embeddings, Vector Database

- Implemented semantic search using document embeddings and vector similarity retrieval, exploring vector stores and retriever-based architectures for LLM applications.

Education

Bachelor of Engineering (B.E.) – Information Technology

Mumbai, India

Saraswati College of Engineering

2024

Certification

Google Data Analytics Professional Certificate – Coursera
